

Appl. No. 11/111,111  
Type: Design No. 2,433,533  
Initial Filing Date: 11/13/04  
R. P. O. Date: Action of Nov. 13, 2007  
Customer No. 27752

#### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

##### Listing of Claims:

1. (Original) A fastening member extending in a longitudinal direction and in a lateral direction and having a lateral centerline, the fastening member comprising a base panel and a shaped tab extending laterally from the base panel, wherein
  - the shaped tab has a longitudinal centerline, a lateral centerline, a distal portion and a proximal portion, the shaped tab has a contour edge comprising a shaped upper edge and a shaped lower edge,
    - the shaped upper edge and the shaped lower edge are symmetric with respect to the longitudinal centerline of the shaped tab when relatively shifted in the longitudinal direction and are asymmetric with respect to the lateral centerline of the fastening member.
2. (Original) The fastening member according to Claim 1 wherein the shaped tab has a center point X positioned at the center on the longitudinal centerline of the shaped tab sectioned by the shaped upper edge and the shaped lower edge, a point C in which the lateral centerline of the shaped tab passing the center point X intersects the contour edge of the shaped tab, a point A in which the longitudinal centerline of the shaped tab intersects the shaped upper edge of the contour edge, and a point B in which the longitudinal centerline of the shaped tab intersects the shaped lower edge of the counter edge, wherein the greatest distance from the center point X to the contour edge extending between the point C and the point B is greater than the greatest distance from the center point X to the counter edge extending between the point A and the point C.
3. (Original) The fastening member according to Claim 2 wherein the greatest distance from the center point X to the contour edge extending between the point C and the point B is present between about 30 degree and about 60 degree downwardly with respect to the lateral centerline of the shaped tab.
4. (Original) The fastening member according to Claim 3 wherein the greatest distance from the center point X to the counter edge extending between the point A

App. No. 10/321,  
Art. 262, Inc.  
Am'd dated February 25, 2005

Continuation No. 113742

and the point C is present between about 30 degrees and about 60 degrees upwardly with respect to the lateral centerline of the shaped tab.

5. (Original) The fastening member according to Claim 2, 3, or 4 wherein the greatest distance from the center point X to the contour edge extending between the point C and the point B is not less than about 120 % of the greatest distance from the center point X to the counter edge extending between the point A and the point C.

6. (Currently Amended) The fastening member according to Claim 1 any one of the preceding claims wherein the proximal portion of the shaped tab has a recess.

7. (Currently Amended) The fastening member according to Claim 1 any one of the preceding claims wherein the distal portion of the shaped tab has an upper rounded corner and a lower rounded corner.

8. (Original) The fastening member according to Claim 7 wherein the upper rounded corner has a greater radius of curvature than the lower rounded corner.

9. (Currently Amended) The fastening member according to Claim 1 any one of the preceding claims wherein the shaped tab has a fastening material disposed thereon.

10. (Currently Amended) The fastening member according to Claim 1 any one of the preceding claims wherein the base panel has stretchability.
